

Manual Gates

FloodBreak Swing Gates and Drop-In Panels are best quality active closures for manual protection of non-critical doorways and entrances. They are ideal for cost-sensitive locations or as a complement to FloodBreak's passive flood mitigation solutions in larger campus-wide projects.

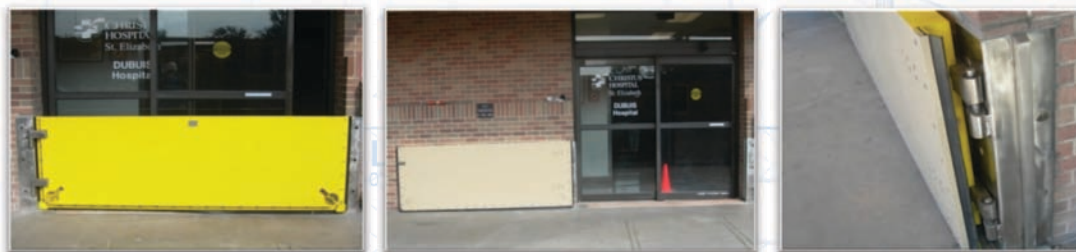

Non-Critical Doorways * Secondary Facilities * Cost-Sensitive Locations

Superior Flood Control

Though FloodBreak is best known for its revolutionary passive flood mitigation products, there are times where less costly active flood control solutions are appropriate. FloodBreak provides engineered active options.

FloodBreak Swing Gate

A first-class product for manual protection of non-critical doorways and entrances. It is the highest quality active closure available today.

FloodBreak Drop-In Panel

An engineered panel solution that utilizes a state-of-the-art sandwich panel design to provide high-quality protection for secondary locations. The panel provides the ultimate in load strength, stiffness, and is light weight for manual handling. It is excellent for vent panels, exterior closets and non-critical doors.

Features:

- FloodBreak quality construction
- Manufactured to your exact size requirements
- Built with weather resistant materials & durable rubber gaskets
- Easy to install
- Requires minimal maintenance & training
